

**NOTE:** <http://www.w3schools.com/> is a great place to learn HTML and CSS!

### HTML Fun!:

Match the following HTML tags with their corresponding meaning:

|                                |                                      |
|--------------------------------|--------------------------------------|
| 1. <HTML>                      | A. Insert an image                   |
| 2. <P>                         | B. Emphasize the text with italics   |
| 3. <UL>                        | C. Add a title to the browser window |
| 4. <LI>                        | D. Add the largest header available  |
| 5. <BR/>                       | E. Begin the body of the page        |
| 6. <A HREF = "www.google.com"> | F. Insert a line break               |
| 7. <BODY>                      | G. Begin a new paragraph             |
| 8. <EM>                        | H. Begin the HTML content            |
| 9. <OL>                        | I. Add a smaller header              |
| 10. <H1>                       | J. Insert a form                     |
| 11. <H4>                       | K. Insert a table                    |
| 12. <FORM>                     | L. Begin the head of a page          |
| 13. <HEAD>                     | M. Insert a table row                |
| 14. <IMG SRC="jackets.jpg" />  | N. Insert a comment                  |
| 15. <SCRIPT>                   | O. Begin Javascript                  |
| 16. <STRONG>                   | P. Add an ordered list               |
| 17. <TABLE>                    | Q. Add a link to Google              |
| 18. <TD>                       | R. Add a list item                   |
| 19. <TR>                       | S. Add an unordered list             |
| 20. <TITLE>                    | T. Emphasize the text with bold font |
| 21. <!-- -->                   | U. Insert a table column             |

### Yay for CSS!:

First, what is CSS used for?

---

What would the following CSS code accomplish?

```
body{
    background-color:blue;
}
p{
    font-size:18;
```

```
    font-family:Arial,Verdana,Sans-serif;
}
h1 {
    text-align:center;
    text-decoration:underline;
    color:green;
}
```

What code do you need to put in your HTML file to make it read the CSS? Hint: It goes under the <head> tag in the HTML.

---

### **Uploading Your Files to Prism:**

Where is your personal prism site located?

---

If you upload a file to it via WinSCP or Fugu, then you edit the file on your computer, will your website automatically update?

---

Where do you want to go to validate your files?

---
